Title: Analysis of the transient dynamics for reconnecting a multi-inverter GFM system to the power grid

Rutvika Manohar is a researcher at Mitsubishi Electric. After graduating from her home country in India she received a MEXT scholarship to study in Japan at the Kyoto University where she completed her Ph.D in 2021. Both in industry and academia her research has been focus on developing the hardware and controls strategies necessarily for the power grid as it scales its utilization of renewable and distributed energy sources.
